

## **Business Analytics & Machine Learning Tutorial sheet 5: Decision trees**

Prof. Dr. Martin Bichler, Prof. Dr. Jalal Etesami Julius Durmann, Markus Ewert, Johannes Knörr, Yutong Chao November 24, 2023

## Exercise T5.1 Entropy and Information

Compute the following:

- a) entropy((0.1, 0.9))
- b) entropy((0.8, 0.2))
- c) entropy((0.5, 0.5))
- d) entropy((0.8, 0.1, 0.1))
- e) info([2, 3])
- f) info([5, 4])
- g) info([2, 3], [5, 4])
- h) info([2, 3], [9, 0])

## Exercise T5.2 Optimal splits

Compute the optimal splits for the following data using info gain.

a)	35	35	37	40	40	40
a)	F	F	Т	F	Т	Т

b)	36.8	36.8	37.2	38.3	38.3	39.7
	Т	F	F	Т	F	F

## Exercise T5.3 Construct decision tree based on gini index

Past Trend	Open Interest	Trading volume	Return
Positive	Low	High	Up
Negative	High	Low	Down
Positive	Low	High	Up
Positive	High	High	Up
Negative	Low	Low	Down
Positive	Low	High	Down
Negative	High	High	Down
Negative	Low	Low	Down
Positive	Low	High	Down
Positive	High	High	Up

In order to construct the decision tree for variable Return,

- a) Compute the Gini index of Past Trend, the Gini index of Open Interest, and the Gini index of Trading Volume.
- b) Choose the criterion of the decision tree at depth 1 by using Gini index
